DESIGN TOOLS

- Figma
- FigJam
- Framer
- Token Studio
- Figma Variables

UX PROCESS

- Information Architecture
- User Flows
- Wireframing
- Prototyping
- Usability Testing
- Developer Handoff

THINKING

- Design Systems
- Design Tokens
- Enterprise UX
- Multi-role B2B
- WCAG
- Edge-case Design
- Component Architecture

EDUCATION

B.Tech, Information Technology
Vishnu Institute of Technology
2023 · CGPA 7.21

CERTIFICATIONS

- Google UX Design Professional Certificate
- Internshala UI/UX Design

ABOUT

Product designer with experience shipping **enterprise UX for K–12 EdTech**. At MyClassboard, I've designed **60+ screens across three role-based modules** from information architecture and workflow mapping to high-fidelity Figma prototypes and developer handoff. I also built a **token-based design system from scratch** for a university admissions portal. I use AI tools to move through work faster, I think in systems before I think in screens, and I look for problems worth solving. Looking for a product design role where I can do more than produce screens.

EXPERIENCE

UI/UX Designer Trainee

Jan 2026 – Present

MyClassboard Educational Solutions, Hyderabad — Enterprise SaaS for K–12 schools

■ Canteen Management System — Redesign

- Designed 60+ screens for three user roles (parent, school admin, canteen operator) covering menu management, wallet payments, combo meals, calendar-based meal scheduling, and financial reporting.
- Restructured the module's information architecture — broke complex multi-role workflows into clearer, role-specific navigation without losing existing functionality.
- Worked through real edge cases: add-on item swaps, wallet-vs-online payment logic, empty calendar states, replace-vs-delete patterns, and low-balance alert flows.
- Redesigned reports into a "Daily Money Tracking" view for non-technical school accountants — covering report hierarchy, filters, table layouts, and dashboards.

■ Student Mobile App & Admissions

- Designed a student-facing mobile app covering homework, assessments, study center, analytics, and attendance — focused on reducing cognitive load for students and parents.
- Created admissions landing pages adapted to partner school brand guidelines. Established spacing, typographic hierarchy, and reusable component patterns.

■ Design Systems & Brand Work

- Built a token-based design system for Somaiya Vidyavihar University's admissions portal from scratch — 7 Token Studio + Figma Variables JSON collections covering colour, typography, dimensions, effects, and strings.
- Defined primitive and semantic token layers: surface, border, icon, interactive state, status, and overlay — structured so any designer could extend the system.

PROJECTS

Indian Railways UTS — PNR-Bridge

Self-initiated · Figma

Not a research exercise — I couldn't book an unreserved ticket during a tight connection at Secunderabad because the app's geofencing blocked me at the platform.

- Found a real gap: UTS blocks Paperless booking within 250m of tracks — locking out transit passengers who just arrived and need a connecting ticket.
- Designed a PNR-Bridge flow: user enters arriving train's PNR, system validates arrival within 60 min, opens a temporary booking window. PNR name must match UTS account.

Comingle

Community & skill-sharing app · Figma · Research

- Full design process: 8 user interviews, competitive analysis of 3 platforms, persona creation, empathy mapping. Built a 4-tab IA with Skill Hub. A/B tested 2 onboarding flows with 10 users.
